

Dear Hiring Manager,

With the utmost enthusiasm, I would like to express my interest in the Software Developer position at your company. Through my career, my interest in problem solving has led me from teaching to a full stack development bootcamp. I always knew that I wanted to build and create useful products, and I do believe in that as a former mathematics teacher, my problem solving skills will be great asset to explore unique ways to solve real word problems and reflect those skills in building apps that resolve them. Within the past four months I have gained and refined the skills I need to do so, and the confidence to apply these skills to a job I believe in. I believe that my passion for web development, strong commitment to continuing to learn and develop my skills, and deep interest in and respect for the work being done at your company make me an ideal candidate to join your development team.

As a candidate, here's what I could immediately bring to the table:

An effective communicator: In my role at Concept Schools, I consistently received positive feedback from school parents and students. I was recognized "accomplished teacher" and "most effective teacher by Concept Schools" in the last three years. My collaboration and communication skills when interacting with parents regarding their children learning process to develop effective and result-oriented ways to resolve problems have played an important role in this achievement. The skills I have developed through interactions with parents and students will allow me to quickly assimilate into the company culture at your company, and seamlessly begin working with my team to build quality products.

A disciplined problem solver: I have always displayed my careful approach to problem solving by taking the time to consider each option and determining only the most effective results. In my teaching years, I had always came up with different ways to solve a specific problem in class because students with different skills and abilities were to be able to understand the solution in different ways. I always believe in that I should not have dictated a single way to solve a problem. Throughout my career, I have seen that a method to solve a problem can not be a solution for all. So from this perspective I think collaboration, communication and problem solving skills are crucial to reach out goals. At school, I frequently encountered students whose problems required quick, undivided attention, and I was consistently praised for my quick and effective solutions by administration. As a software developer at your company,

I would apply this same diligence to working with my team to build state-of-the-art, easy to use, user-friendly websites and applications.

A passionate learner: Since discovering my penchant for web development, everything I have engaged in this past year has been driven by my keen interest in the field. Even during my time as a robotics coach, I always felt enthusiasm when designing and building robots with my students for creating a new product that I believed in. It is this passion that has driven every one of my career decisions thus far, and that will continue to drive me to excel and grow in a career with your company.

Thank you for taking the time to read this letter. I look forward to contributing my skills and experiences to the Software Developer position at your company and hope to have the opportunity to speak with you further about how I can be an asset to your team.

Sincerely,

Beyza Kilickol Akurek
